

Case Study:

NSW 2010 Jon Dee

As a businessman and environmental campaigner, Jon Dee sees a bright future for tablets in reducing our reliance on paper.

Planet Ark Co-Founder and NSW Australian of the Year 2010, Dee is also one of the campaigners behind National Tree Day which has seen 2 million volunteers plant 15 million native trees and shrubs. He's also a keen technology lover and has been using tablet computers for almost a decade.

Armed with a sleek **TEGA v2** tablet supplied by Tegatech, Dee finds that working with electronic documents saves both time and trees. The TEGA v2 is Tegatech's own 10-inch tablet running Windows 7. Weighing in at a mere 870gm,

it features a multi-touch display, USB and memory card ports, front camera and Adobe Flash capability.

"I have a policy - when I go into meetings and people offer me wads of paper I refuse it and ask; can I have it as a PDF please?" Dee says.

"That way I can view it on the TEGA and use my fingers to interact with it like with paper, but still retain the advantage of electronically searching the document. The **TEGA v2** is a tablet but it's still a fully-fledged computer running Windows. If you have to look up a certain key phrase in a report, you can find it in seconds on a tablet. So there are some advantages in terms of not just environmental benefits but also time efficiency."

Dee is also an iPad early adopter and, while it has its strengths, he feels the iPad too restrictive to play a key role in a work environment.

"I'm a big fan of the iPad. I use it for reading wired magazine, plus it's great for watching movies or looking at photos.

The rise of the iPad has certainly caused people to think about using tablet computers in a work environment, but perhaps not with a restricted platform like the iPad's iOS. That's where something like the Windows 7-powered TEGA v2 is very interesting, because it gives you the ability to utilise a tablet interface yet still access all your normal programs and the corporate backend," Dee says.

The **TEGA v2** is an excellent option for organisations which are reluctant to implement iPads because of compatibility concerns with existing IT infrastructure, Dee says.

"Using your fingers to interact with a screen is very intuitive. I've strongly believed for a long time that this is where computers are heading. In terms of the size and shape the v2 is very similar to the iPad,

it's certainly a long way from the clunky tablets of old," he says.

"I'll admit that Windows still has some tweaking to do to make Windows 7 as user-friendly as the iPad in terms of interface. Of course that's where Tegatech's expertise comes in. Tegatech's knowledge of the tablet space makes it the perfect partner for tightly integrating a tablet rollout with your existing systems."
